## You can't afford not to.

VERSATEX Building Products is the only company in its industry that has solely focused on the cellular PVC building products market for 20 years. With expertise in design, development, production and sale of PVC building products, VERSATEX's strength lies in innovation and the ability to bring new product solutions and systems to market to help our builders, contractors, architects and homeowners. Dedication, education and innovation equate to VERSATEX being a proven industry leader with an unmatched service platform and best-in-class product quality.

Our XCEED lap siding has exceptional features, such as a unique VZ Drop-Lock that simplifies installation, an IR heat reflective capstock and 16'-0" panels that reduce butt joints. Similar to vinyl siding, but with butt joints secured by a nail hem bracket and screws for a better on the wall appearance. Trim options include 1" pocketed stealth corners, stealth trim, and custom frieze board and custom starter/skirtboard. S4S trim is ideal due to the soft, textured appearance of XCEED.

XCEED is unlike traditional wood sidings that crack, check, and cup over time due to moisture, as well as fiber cement and wood composite sidings that still require paints for protection – just high aesthetic value with little to no maintenance ever required.

VERSATEX has been dedicated to superior quality and performance for over 20 years. In that tradition, XCEED Siding by VERSATEX has been carefully developed and tested and is backed by a Limited Lifetime Warranty. XCEED is a beautiful and elegant addition to a home's exterior, dormers, or gables. Available in a 4 1/2" reveal lap, in six next generation UV resistant colors.

# Engineered for Performance and Low Maintenance. Designed for Beauty and Elegance.

## Profile

### 4 1/2" Reveal x 16'

- 16' lengths allow for a faster, more efficient install, and reduces butt joints.
- XCEED panel factory ends ensure a 16" on center on nail hem slots minimizing cuts and waste.
- Thicker than traditional vinyl siding—greater impact resistance, improved overall strength and an authentic wood siding appearance.
- Ease of installation - Once the first course is level, set the next panel into the VZ Drop-Lock and move to the next course.
- Colors developed using a ASA weatherable and HBU-resistant colored capstock.
- Water resistant—XCEED Siding can't swell, bow, warp, or rot.

## XCEED Siding Accessories to compliment your siding
